

In this practice, you are required to build AFL and run it on the binary at [https://drive.google.com/file/d/1pEQwA5R8soa0PEB4\\_INTJBYdCwRir5aa/view?usp=sharing](https://drive.google.com/file/d/1pEQwA5R8soa0PEB4_INTJBYdCwRir5aa/view?usp=sharing) (Links to an external site.)

AFL is available at <https://github.com/google/AFL> (Links to an external site.) and you can find how to build it in the README. Building the tool is one of the testing points, so try it.

When you are done, take a screenshot of the fuzzing progress and submit the screenshot.
